

North loading-door extension + column-mounted swing jib

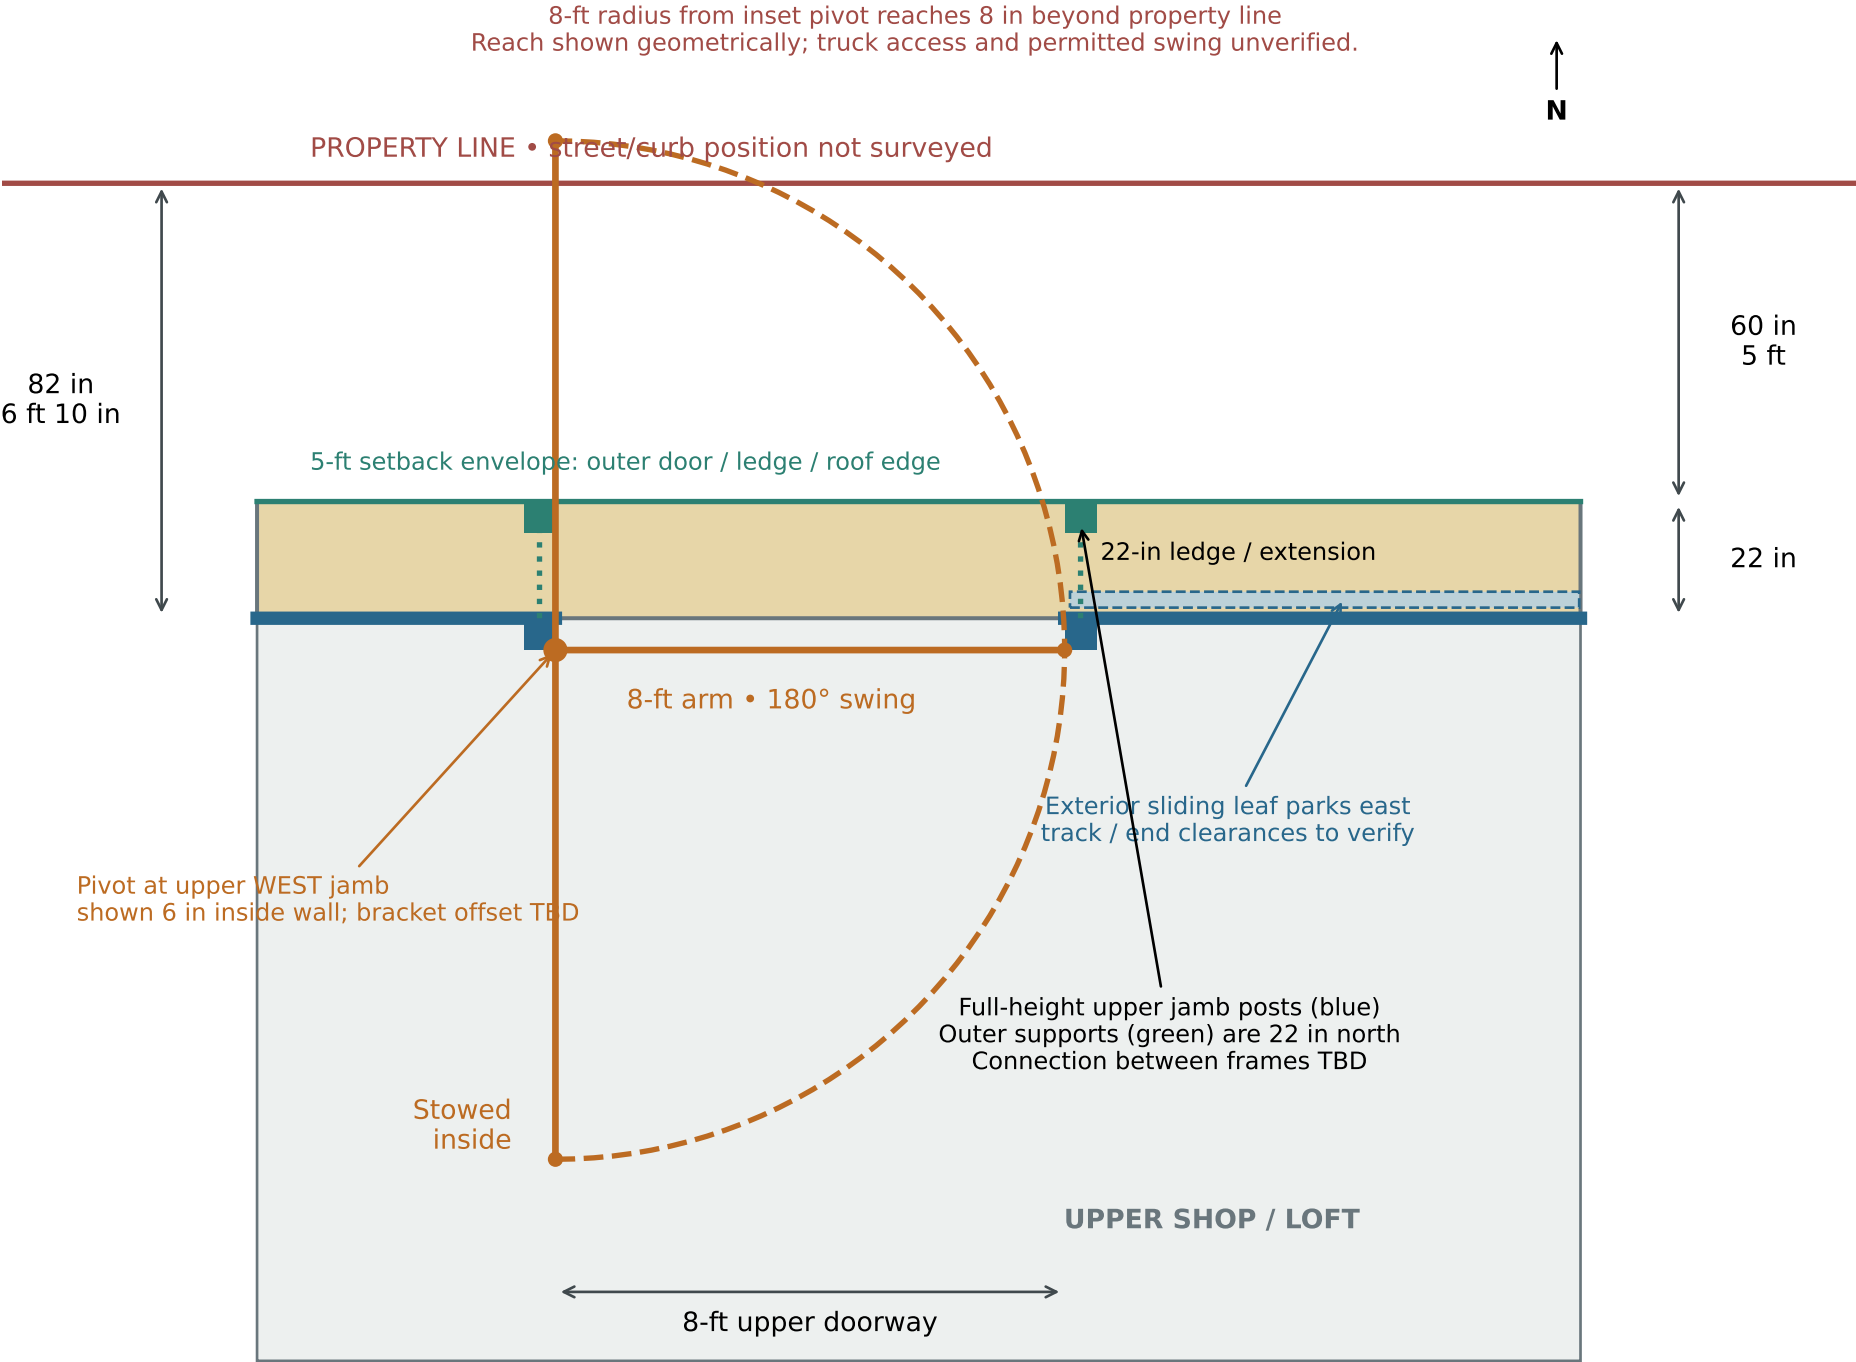

NORTH ELEVATION — conceptual placement

EAST ← Looking south at north wall → WEST

Upper wall stays at current north wall.
Ledge projects toward viewer; guard/loading gate not detailed.

UPPER-FLOOR PLAN — north up, west left

Placement study only. Owner-supplied 5-ft setback assumed, not verified. $82 - 60 = 22$ in gross ledge depth; a 24-in ledge needs upper wall inset another 2 in.
*7-ft upper opening height retained as a sketch assumption. Crane/hoist clearance, guards, sliding-door hardware, column/foundation forces and roof framing remain to design.
Low hip cap retained schematically: 18-in rise above 227.25-in roof datum. North edge ends at setback envelope; no additional north eave beyond it.
