

North loading-door extension + column-mounted swing jib

UPPER-FLOOR PLAN — north up, west left

8-ft radius from inset pivot reaches 8 in beyond property line
Reach shown geometrically; truck access and permitted swing unverified.

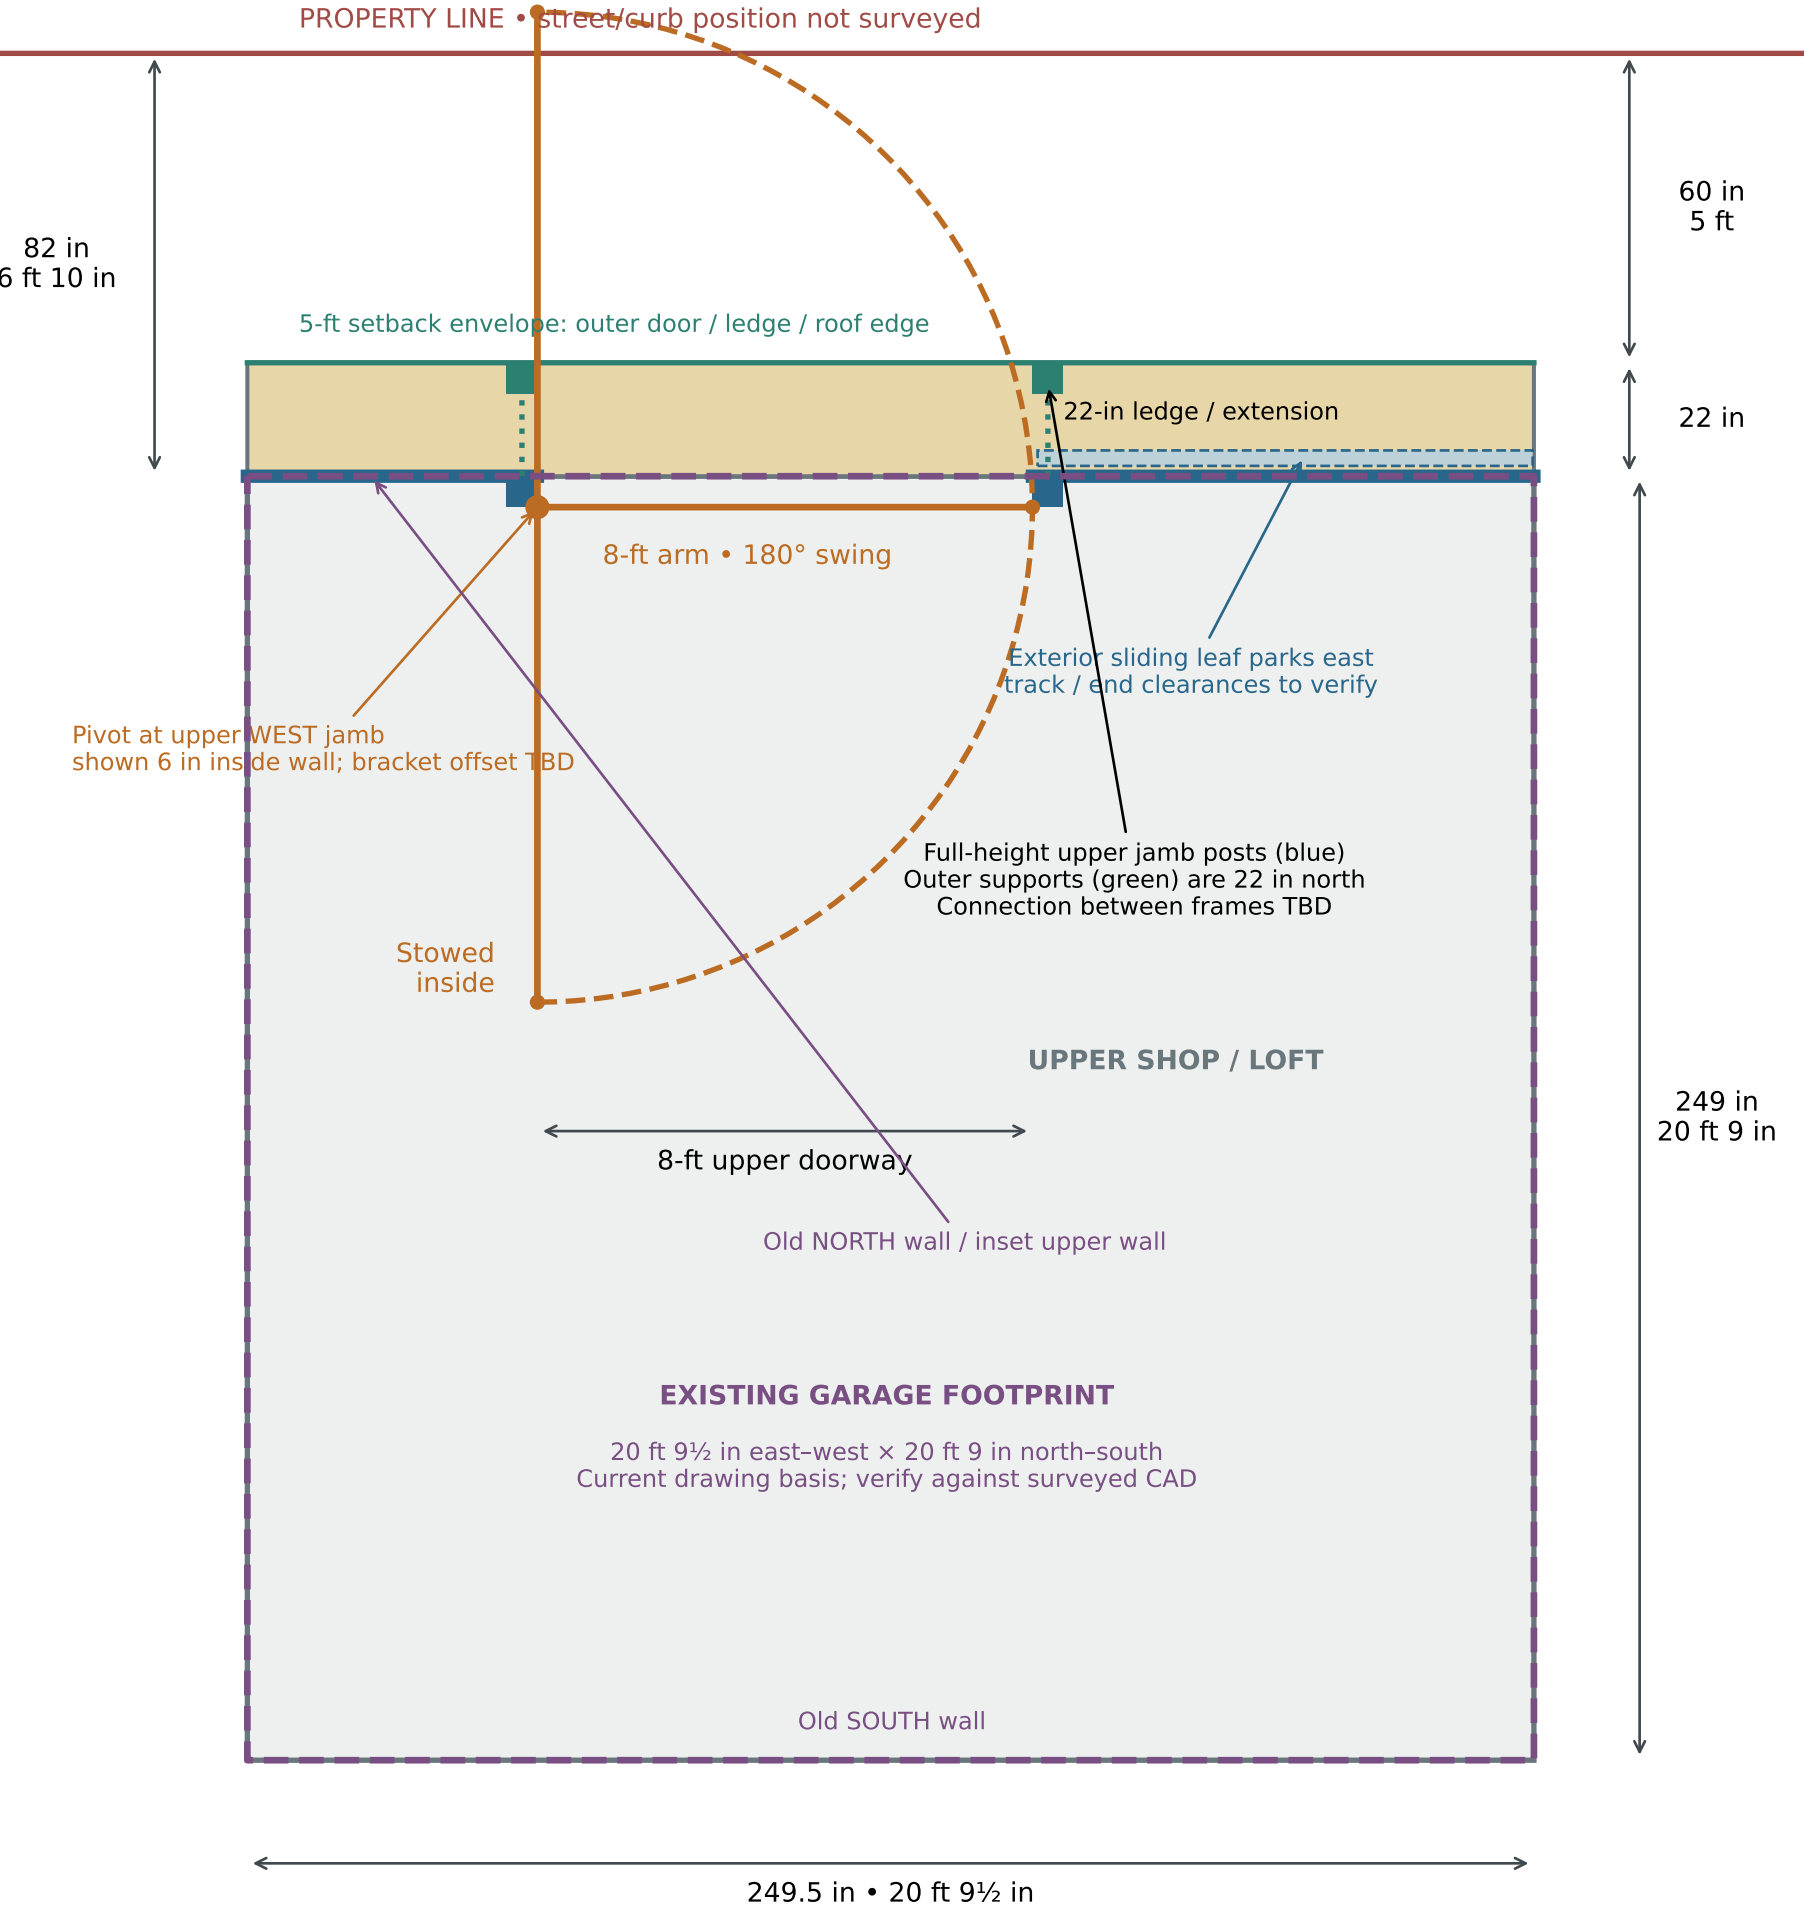

NORTH ELEVATION — conceptual placement

EAST ← Looking south at north wall → WEST

Upper wall stays at current north wall.
Ledge projects toward viewer; guard/loading gate not detailed.

Floor
10 ft

Placement study only. Owner-supplied 5-ft setback assumed, not verified. 82 – 60 = 22 in gross ledge depth; a 24-in ledge needs upper wall inset another 2 in.
*7-ft upper opening height retained as a sketch assumption. Crane/hoist clearance, guards, sliding-door hardware, column/foundation forces and roof framing remain to design.
Low hip cap retained schematically: 18-in rise above 227.25-in roof datum. North edge ends at setback envelope; no additional north eave beyond it.
